Foreword

'A Framework document to set out ideas for environmental improvements to enhance the Stone Town Centre'

Stone town centre has seen many changes in recent years, with the pedestrianisation of High Street, people can now move freely and safely through the heart of the town. The centre is generally seen as vibrant and successful with a distinctive and positive image.

However, we should not become complacent, as there are still plenty of opportunities for continued improvement. This document sets out a range of ideas to guide the continued renaissance of the centre to help to create a sustainable environment in which we can all take pride.

Please think about the future which you would like to see and take your part in influencing it. I am inviting you and everyone else with an interest in Stone and its centre, to consider the ideas in the document and give your views on the issues which it raises – or any others which you think it should cover!

Councillor Doug Davis

Stafford Borough Council
