

Sean Roberts

From: Programme Officer
Subject: FW: Meaford - Policy E5 20348

Sean,

The Inspector asked me today what the output of the proposed Combined Cycle Gas Turbine (CCGT) power station at Meaford would be. I have checked and this would have a nominal generating capacity of 299MW.

I have copied this email to David Smethurst in the Policy Tea. If helpful and acceptable to the Inspector, I could confirm this to the Inquiry at tomorrow's session.

Regards
